The application has been amended as follows:

In the claims:

3. Amend claims 1 and 25, as follows:
 1. (Currently Amended) A computer system for generating a representation of time-based media, the system comprising:
 - a feature extraction module for:
 - extracting, using a feature extraction technique, features from the time-based media, the feature extraction technique specified by a document format specification file; and
 - generating a media representation of the time-based media that represents the extracted features, the media representation including a waveform representing the time based media including the extracted features, a corresponding timeline and a plurality of user-selectable identifiers

indicating locations on the timeline corresponding to the extracted features;

a formatting module communicatively coupled to the feature extraction module, the formatting module for:

formatting the media representation according to layout parameters specified by the document format specification file; and

a printer communicatively coupled to the formatting module, the printer for:

printing the formatted media representation, wherein each of the plurality of user-selectable identifiers in the printed, formatted media representation can be selected to access a corresponding part of the time-based media.

25. (Currently Amended) A method for generating a representation of time-based media, the method comprising:

extracting, using a feature extraction technique, features from the time-based media, the feature extraction technique specified by a document format specification file;

generating a media representation of the time-based media that represents the extracted features, the media representation including a waveform representing the time based media including the extracted features, a corresponding timeline and a plurality of user-selectable identifiers indicating locations on the timeline corresponding to the extracted features;
